

Semiconductor Equations *by* Christian A. Ringhofer, Christian Schmeiser, Peter A. Markowich

ISBN: 3211821570

ISBN13: 978-3211821572

Author: Christian A. Ringhofer, Christian Schmeiser, Peter A. Markowich

Book title: Semiconductor Equations

Pages: 248

Publisher: Springer; 1990 edition (November 8, 2002)

Language: English

Category: Engineering

Size PDF version: 1692 kb

Size ePUB version: 1893 kb

Size FB2 version: 1656 kb

Other formats: rtf mobi lit rtf

In recent years the mathematical modeling of charge transport in semi conductors has become a thriving area in applied mathematics. The drift diffusion equations, which constitute the most popular model for the simulation of the electrical behavior of semiconductor devices, are by now mathematically quite well understood. As a consequence numerical methods have been developed, which allow for reasonably efficient computer simulations in many cases of practical relevance. Nowadays, research on the drift diffusion model is of a highly specialized nature. It concentrates on the exploration of possibly more efficient discretization methods (e.g. mixed finite elements, streamline diffusion), on the improvement of the performance of nonlinear iteration and linear equation solvers, and on three dimensional applications. The ongoing miniaturization of semiconductor devices has prompted a shift of the focus of the modeling research lately, since the drift diffusion model does not account well for charge transport in ultra integrated devices. Extensions of the drift diffusion model (so called hydrodynamic models) are under investigation for the modeling of hot electron effects in submicron MOS-transistors, and supercomputer technology has made it possible to employ kinetic models (semiclassical Boltzmann-Poisson and Wigner Poisson equations) for the simulation of certain highly integrated devices.
